

# Complex products need connected product development

Get the end results you're after without the roadblocks you're used to.

Open, clear communication between all teams and stakeholders is the key to faster product development. Autodesk's cloud-based Product Data Management (PDM) and Product Lifecycle Management (PLM) system can help you avoid the confusion, data loss, and delays inherent in the old ways of product development. By leveraging native integrations with every major CAD system and an open API to integrate with business systems, Autodesk PLM will allow everyone within your product lifecycle to work from a central source of truth.

## Three areas Autodesk multi-CAD PLM will help accelerate your product development

### 01. Productive teams

- Faster product development with centralized data management and workflow automation.
- CAD-Integrated data management works with the tools you're used to, to connect silos, reduce data loss, and provide a consolidated BOM.
- Cloud-based solution provides anytime, anywhere access from a browser and eliminates costly IT overhead associated with traditional PLM systems.

### 02. Dynamic decisions

- Earlier and better decision-making with real-time data sharing with stakeholders lowers change costs and reduces launch delays, scrap, and repair & warranty risks.
- Vastly improved collaboration through Autodesk PLM allows better tracking of changes, costs, and materials, more efficient review cycles, and automated task notifications and reporting dashboards.

### 03. Agile supply chains

- Faster, easier visibility and control with a supplier portal that provides access to identifiable and selectable designs for quoting and full 2D or 3D files to better understand orders.
- More robust external collaboration with direct access to the latest design data provides real-time markup and feedback loops.
- Better identify preferred suppliers in your extended ecosystem with up-to-date information and avoid procurement pitfalls and supply chain challenges.

It's time to cut through the obstacles in your product development processes and get the best possible products to market more profitably and in the shortest possible time. With multi-CAD integration and cloud data and process management capabilities, Autodesk PLM is designed to do just that.
